Sample SAT Tests

THE FIRST STEP TO SCORE IMPROVEMENT

The Pre Test section of the Sample Tests program includes a series of questions on each of the sixteen Math and Verbal topics of recent SAT's. Upon your completion of the Pre-Test, the program provides a complete analysis of your performance, indicating what topics to study in order to improve your score.

Sample Test One is a simulated SAT exam timed and administered by the program. The program then scores the test on the 800 scale to give you an idea of how you would have done on an actual SAT exam. With Sample Test One you become familiar with the exam format, test your understanding of the topics reviewed after the Pre-Test, and begin to practice test-taking strategies.

Sample Test Two, taken after studying specific SAT topics, ensures your familiarity with the exam format and measures your improvement on the same 800 test scale. Sample Test Two completes the thorough, intensive testing program of the Sample SAT Tests module. The results are: test-taking skills, understanding of specific SAT topics, and confidence that you will maximize your scores.

ALSO AVAILABLE: MATH AND VERBAL MODULES

The Hayden SAT Score Improvement System includes Math and Verbal modules which provide tutorials, drill, and analysis for each topic of the SAT.

For the first time, a computer-aided instruction system, developed and tested in high schools across the country, significantly enhances the learning process needed to improve SAT scores. The unique system:

- Displays all material on the screen of your computer — no need for constant referrals to a manual or text.
- Uses tutorials, also totally on-screen, to explain not only the correct answer to problems, but also the best way to attack other problems of the same general type.
- Facilitates quick and easy access to any section of a module using the on-screen function keys.
- Provides the most complete and substantial score-improvement software available today

THE MATH MODULE

- The **Algebra Section** provides instruction and practice in solving the entire range of algebra problems found on the SAT — linear and literal equations, systems of linear equations, quadratic and radical equations, and reducing fractions.
- The **Geometry Section** provides instruction and practice in solving problems involving angle sums, equality of angles and sides of triangles, parallel lines, angles of a circle, the Pythagorean Theorem, special triangles, perimeters, areas and volumes. All figures needed to solve the problems are illustrated on the screen.
- The **Quantitative Comparisons and Word Problems Section** covers the remaining subjects in the Mathematical section of the SAT, including quantitative comparisons, fractions and decimals, percentages, ratios and proportions, sequences, graphs and word problems.

THE VERBAL MODULE

- The **Vocabulary Section** provides a thorough review of antonyms, analogies and sentence completions, as well as an on-screen dictionary of 1000 words.
- The **Reading Comprehension Section** offers strategies and practice in reading passages and responding to questions about the material just read.
